

At my home the cellular service is terrible and I made many calls to my provider but to no avail. I contacted Wilson Antennas and with the help of their professional staff we developed a solution. It works and it cost me a small fortune to install \$600.00. Not a lot to some but with five kids and a small salary it is a lot. I cannot afford to replace this equipment and believe that it should be grandfathered into any new rules you pass. I would also like any new rules that you pass to force carriers to disclose their cell tower and broadcasting bandwidth in all areas so consumers can make the right cellular choices and booster choices. As it took three tries to lock on to the Local Verizon tower with the right bandwidth for our booster and that cost us over hundred extra dollars.
